

OLU ADUN

Business Analyst | Product Owner | Healthcare & Financial Services

Baton Rouge, LA | oluadun10@gmail.com | (478) 874-9657 | [linkedin.com/in/oluadun](https://www.linkedin.com/in/oluadun)

PROFESSIONAL SUMMARY

Business Analyst and Product Owner with 7+ years delivering digital products across Epic-based healthcare systems and enterprise insurance infrastructure. Engineering-trained with a systems-thinking foundation that accelerates requirements analysis, current state/future state process design, and stakeholder management in regulated environments. Operates as a PO-primary BA: owns backlogs end-to-end, writes precise user stories and acceptance criteria for both front-end UI and back-end integration work, and has reduced sprint carryover by 27% and defect re-opens by 32% through disciplined grooming and requirements clarity. Certified Scrum Master and Product Owner who surfaces risks early, brings mitigation options to leadership, and maintains delivery momentum through ambiguity and regulatory complexity.

PROFESSIONAL EXPERIENCE

Business Analyst / Product Owner | Ochsner Health

May 2022 – Present

Hybrid | New Orleans, LA | Healthcare IT | Epic EHR

- Own and manage a multi-sprint product backlog in Jira and Confluence across 150+ active stories tied to Epic EHR clinical workflows, reducing sprint carryover by 27% through continuous grooming, proactive prioritization, and sprint-readiness checks before every planning session.
- Author detailed user stories and acceptance criteria for enhancements and system integrations - covering both front-end UI and back-end HL7/interface work - driving a 32% reduction in defect re-opens across UAT cycles.
- Lead requirements gathering via stakeholder interviews, workshops, and clinical process walkthroughs - documenting current state and future state workflows and translating Epic-specific business needs into functional specifications adopted by engineering, QA, and compliance teams.
- Facilitate all Agile ceremonies - standups, sprint planning, refinement, reviews, and retros - for a team of 13 spanning engineering, QA, clinical operations, and compliance, improving on-time delivery by 18%.
- Lead roadmap prioritization and stakeholder management across clinical, IT, and executive audiences - communicating enhancement trade-offs, interoperability dependencies, and delivery status.
- Build Power BI and Tableau dashboards and operational reports using Epic data flows, and leverage Databricks for deeper operational data analysis, improving reporting accuracy by 22% and giving clinical leadership direct visibility into performance metrics previously tracked manually.
- Partner with UX and engineering on front-end clinical UI requirements using Figma wireframes as a requirements communication tool, ensuring screen-level acceptance criteria align with workflow logic before development begins.
- Lead business acceptance testing and defect triage for Epic releases - validating solutions against clinical requirements rather than technical specs alone - reducing post-production incidents by ~15% over two release cycles.
- Apply Lean Six Sigma principles to identify process improvement opportunities in clinical workflows, documenting gap analyses and recommending solutions that reduced rework and improved sprint throughput.
- Ensure regulatory compliance requirements are captured in functional specifications and acceptance criteria, coordinating with compliance and legal teams to validate deliverables meet HIPAA and clinical standards.
- Mentor 2 junior analysts in Epic workflow documentation, user story writing, and Agile ceremony participation - improving team requirements quality and consistency within the first quarter of engagement.

Business Analyst | Scrum Master | State Farm

Feb 2019 – Apr 2022

Remote | Insurance | Enterprise Platform & Infrastructure

- Gathered, analyzed, and documented business requirements across 5+ concurrent workstreams on the enterprise platform and infrastructure layer powering core insurance applications - enabling 3 major releases per year delivered on schedule in a regulated environment.

- Developed functional specifications, user stories, and acceptance criteria for policy management pipeline and claims infrastructure projects, and established requirements clarity that kept engineering and QA teams unblocked across release cycles.
- Managed claims infrastructure ticketing and incident tracking in ServiceNow, coordinating defect resolution and change requests across engineering, QA, and business operations teams throughout the release cycle.
- Facilitated Scrum ceremonies for teams of 8–12 in a SAFe environment, standardized backlog refinement practices, and reduced mid-sprint scope changes - improving sprint predictability and supporting continuous improvement across delivery teams.
- Documented current state and future state process flows and data flow diagrams for policy management workflows and claims system interactions - gap analysis findings, implemented across two departments, reduced operational overhead by ~15%.
- Led business acceptance testing and defect triage for claims infrastructure and platform releases, coordinating QA and business SMEs to resolve 95+ defects per release - ensuring regulatory compliance and business sign-off before each production deployment.
- Managed stakeholder relationships across engineering, architecture, compliance, and business ops teams - translating technical constraints into business language and business priorities into sprint-ready requirements.
- Defined and documented BA process standards and continuous improvement guidelines that became a department-wide playbook, reducing new analyst ramp-up time and improving requirements consistency across platform teams.
- Maintained requirements documentation, process maps, and sprint artifacts in Confluence, ensuring all functional specs, meeting notes, and decision logs were version-controlled and accessible to distributed teams.
- Leveraged SQL, Tableau, and Power BI to analyze claims and policy operational data, producing insights that informed product prioritization decisions and regulatory risk reporting for senior leadership.

CORE COMPETENCIES & TECHNICAL SKILLS

Product Ownership	Backlog Management, Roadmap Development, User Story Writing, Acceptance Criteria, Sprint Planning, Agile Ceremonies, Prioritization Frameworks
Business Analysis	Requirements Gathering, Stakeholder Management, Process Mapping, Functional Specifications, Current State/Future State Analysis, Gap Analysis, UAT, Business Acceptance Testing, Defect Triage, BABOK, BPMN 2.0
Domain Expertise	Epic EHR, Clinical Workflow Analysis, Healthcare IT, HL7/Interoperability, Policy Management, Claims Infrastructure, Regulatory Compliance, HIPAA
Agile & Delivery	Scrum, SAFe, Kanban, Lean Six Sigma (Green Belt), Waterfall, CI/CD, Sprint Metrics, Risk Identification & Mitigation, Process Improvement, Continuous Improvement
Data & Analytics	SQL, Power BI, Tableau, Databricks, Dashboard Design, Data Flow Analysis, Operational Reporting
Tools & Platforms	Jira, Confluence, Azure DevOps, Figma, ServiceNow, Productboard, Aha!, Salesforce, Balsamiq, Miro, Lucidchart, MS Visio, Trello

CERTIFICATIONS

✳ Certified Scrum Product Owner (CSPO) - <i>Renewal 2026</i>	✳ Lean Six Sigma Green Belt - <i>Issued 2024</i>
✳ Certified Scrum Master (CSM) - <i>Renewal 2026</i>	✳ Tableau Desktop Specialist - <i>Issued 2021</i>

EDUCATION

M.S. Industrial & Systems Engineering | Louisiana State University - 2013

Minor: Information Systems & Decision Science (ISDS)

B.S. Civil Engineering | University of Ibadan - 2009
